The New Prototype Arms

Posted by RobbieLathem - 17 Jun 2012 20:44

Hey guys just wanted to show my video I did after I got home from Blade this year, I got hooked up with Clay and was able to score a set of the new prototype arms. I really like the new arms they work great. The micro adjustment is ingenious. Here is a look at the new arms on my YouTube channel

Christopher,

If you use a *little* bit of lube on the joints it helps this lockup significantly. I add a bit of very light oil, let it sit for a minute, work the joint in all dimensions for a bit, then wipe out any excess.

Works wonders!

Phil

ball joint is definatly the way to go (been working on something for myself)

what you currently have keeps locking up on me

damn annoying

but I think its because the bottom pins are to lose the joints just keep collapsing on each other making them interlock

Hi guys! New to the forum. New to WEPS (hasn't even arrived yet) but this post put a question in my mind....

Do the new arms allow lower than 15° angles?

Thanks,

Ken

Hey Ken,

Then new arms come with a riser that raises the vise up by an inch and reduces the angle by 2 degrees, so on a knife that extends 5/8" from the top of the vise, you can now get to 13 degrees. With knives that are wider and extend higher above the clamp, you can get even lower.

_____

Thanks Clay. 13° is perfect for some of my favorite EDCs. I'm in!
