Super polished edges
Posted by wickededge - 07 Aug 2011 12:31

This is one of my Benchmade Strykers:

and attached is one of the Kershaw Blur that Curtis Womack gave me.

Hey Thanks Clay ! I don't mind at all if you use the pics. I'm learning how to polish the blades , but not up to the standards as some on here ... hint hint but I'm working on it.

_____

I had a great time making snacks and taking photographs of this sharpened knife. Edge angle is 20 degrees per side, finished at .5 microns with diamonds on leather strops. Steel is AUS-8.

_____

Here are a few of the mule from Farid, made of CPM REX 121:

The effect with the one above is really cool - it looks like there are big chunks missing from the blade. It's actually just the way the finger grooves come up to meet the edge and are reflected.

This last image isn't super impressive, but I like the look of it with the steel dust and soft reflection. This is just after the 600# diamond stones.

Yikes! Those are spectacular shots of that highly reflective edge you put on the Farid blade! I can't believe it took only 4 minutes to raise burrs on that formidable steel edge. I look forward to getting my folder from Farid hopefully sometime in May. Who knows?! He is very mysterious about his work flow so one never knows.

You are up late tonight boss! Can't sleep? Me too!

Cheers

Leo
